

**AMENDMENTS TO THE SPECIFICATION:**

*Please replace the paragraph beginning at page 5, line 4, with the following amended paragraph:*

Generally, for sub-sea applications, the seabed temperature of the water system can be as low as 5 degrees Celsius, and the wellhead temperature can be up to 200 degrees Celsius. For example, the system water temperature at the wellhead can be in the range 80-200 degrees Celsius, and the seabed temperature can be below 40 degrees Celsius, and typically as low as 5 degrees Celsius.
